

## 325th Fighter Wing Team Tyndall Environmental Program

Team Tyndall is fully committed to minimizing the impacts of our operations on the environment and maintaining our excellent reputation for environmental stewardship. Our goal is to sustain mission capability while integrating sound environmental practices throughout Team Tyndall's operations. Our entire workforce, including military, civil service, and contract personnel, must be aware of and abide by the base environmental management system (EMS). The fundamental principles of our EMS are:

1. Comply with environmental regulations, laws, and other requirements.
2. Maintain an effective environmental management system that will meet the goals of this policy.
3. Promote environmental training and awareness at all levels.
4. Conserve natural resources, prevent pollution, and recycle.
5. Maintain open communication with the surrounding communities concerning environmental issues.
6. Review and update the environmental management system and supporting documentation to reflect current base operations.
7. Demonstrate a dedication to continual improvement by identifying objectives and targets that will enhance environmental performance.

Protecting the environment at Tyndall AFB is everyone's job regardless of position, rank, salary or experience. Team Tyndall's Environmental, Safety, and Occupational Health Council is dedicated to providing leadership required to achieve the principles of this policy. Together we can execute our mission successfully while minimizing the effects of our operations on the environment. Tyndall's EMS is in accordance with Air Force Instruction 32-7001 *Environmental Management*, including the Tyndall AFB Supplement establishing an EMS policy.

For additional information about this program, or questions about the EMS at Tyndall AFB, please contact the 325 Civil Engineer's Environmental Element, at 283-2493.

DEREK C. FRANCE, Colonel, USAF
